

Comments & Suggestions Regarding WMC

Comments:

The WMC meetings are an extreme benefit for program managers. It enables pertinent information to be shared and discussed. It also enables program managers to ask questions and receive verification on important permit issues. These meetings establish consistency in the watershed and will help to create positive results in eliminating storm water pollution.

Suggestions:

There should be a program that introduces new program managers to the permit. A possible mentoring program could be developed that would help transition new people into the field of storm water issues. There are many complex and diverse concerns that must be taken into consideration when coordinating permit compliance and having some type of training or educational overview would be very beneficial to all program aspects. This is a growing concern with the exit of many long time professionals from the field.
